Online/Distance training Program

APSCO has developed Online/Distance training program as an online mode of delivering education and training to the Member States. APSCO has established Education Training Center at the APSCO Headquarter, which is a tele-conferencing system based on internet network connecting hub-center at the APSCO HQ and sub-centers in the Member States, and all are equipped with computers and training facilities. The first on-line training was organized in 2014 on trial basis for testing the system in real-time and full-scale including all the Centers in the Member States. APSCO combined online training with distance training in last 4 years and 2-4 online/distance trainings were organized each year.
